Employee Performance

Main Navigation Hub (Landing Page)

- 1. Brand Identity Integration:** The Panifica logo is strategically centered to establish a strong visual anchor and reinforce the brand's professional identity from the moment the report is opened.
- 2. Interactive Navigation System:** Features four primary interactive buttons designed for a seamless user journey, providing direct access to specialized analytics: Overview, Marketing ROI, Customer Insights, and Employee Performance.
- 3. Smart User Experience (UX):** Enhanced with Hover Tooltips that trigger brief descriptions for each category. This intuitive design guides the user and facilitates faster, data-driven decision-making.
- 4. Visual Intuition & Consistency:** A modern interface utilizing a sophisticated Black & Gold color palette. This ensures a professional, cohesive look that is both aesthetically pleasing and easy to navigate.

Overview

1. Top Key Performance Indicators (Business Health)

- **Total Ad Spend (\$157.32K):** Represents the total investment across all digital marketing channels to attract potential customers and drive traffic.
- **Total Conversions (9,806):** The total number of successful actions or bookings completed, reflecting the overall volume of business generated during the period.
- **CPA - Cost Per Acquisition (\$16.04):** A key efficiency metric showing the average cost to acquire a single customer; it helps in assessing the profitability of marketing campaigns.

- **Count of Employees (458):** Indicates the total workforce size involved in service delivery, which is essential for balancing capacity with the high volume of conversions.
 - **Cancellation Rate (9%):** Measures the percentage of bookings that did not proceed, serving as a vital indicator of service reliability and potential revenue loss.
-

2. Conversions Distribution (Bar Chart)

- **Analysis:** Ranking the top-performing categories or services based on the number of successful conversions.
 - **Insight:** The "**Success**" category is leading significantly, while others like "**Treat**" and "**Skin**" show consistent demand. There is a noticeable drop-off in the lower-ranked categories like "**Possible**".
 - **Recommendation:** Re-allocate a portion of the marketing budget from lower-performing services to the top 3 (Success, Treat, Skin) to maximize the volume of high-intent bookings.
-

3. Sum of Conversions by Date (Area/Line Chart)

- **Analysis:** Monitoring the daily fluctuations and trends of conversions over a 6-month period (Nov 2024 - Apr 2025).
- **Insight:** The data shows significant volatility with frequent peaks, particularly in **January and April 2025**. However, there are sharp dips that suggest "off-peak" days where the resources might be underutilized.

- **Recommendation:** Analyze the specific days of the "peaks" to identify successful promotions and replicate them during the "dips" to stabilize the daily revenue stream.
-

4. Marketing Channel (Slicer/Filter Analysis)

- **Analysis:** Segmentation of data across 6 main channels: **Email, Google Ads, Organic, Facebook, Instagram, and Referrals.**
- **Insight:** The presence of a diverse channel mix is a strength. However, without looking at the filtered view, the "General Overview" relies on all channels performing in sync.
- **Recommendation:** Use the interactive slicer to identify which channel contributes to the highest conversion peaks in the "Sum of Conversions by Date" chart to double down on the most effective platform.

Sum of Ad Spend, Sum of Conversions and ROAS by Marketing Channel

1. Marketing ROI Key Performance Indicators (Financial Efficiency)

- **Conversion Rate (6.23%):** Measures the percentage of visitors who successfully booked a service, reflecting the effectiveness of the marketing content in driving action.
- **ROAS (3.33):** Return on Ad Spend; indicating that for every dollar invested in advertising, the business generates \$3.33 in revenue, confirming the profitability of current campaigns.

- **CPA (\$16.04):** Cost Per Acquisition; represents the average cost to acquire a single customer, a vital metric for evaluating budget efficiency against profit margins.
 - **NO. Marketing Channel (6):** The number of active marketing channels being tracked, ensuring a diversified traffic mix and reducing dependency on a single platform.
 - **NO. Service (837):** The total number of distinct service types included in the analysis, demonstrating the comprehensive scope of the report across all business offerings.
-

2. Total Ad Spend for each Marketing Channel (Donut Chart)

- **Analysis:** A breakdown of the total advertising budget distribution across the six active marketing channels.
 - **Insight: Google Ads (30.55%) and Facebook Ads (24.55%)** consume more than half of the total marketing budget, identifying them as the primary drivers of the brand's reach.
 - **Recommendation:** Conduct an A/B test on high-spend channels (Google & Facebook) to ensure that the creative assets are fully optimized, preventing any budget waste on underperforming ad sets.
-

3. Sum of Ad Spend, Sum of Conversions, and ROAS by Marketing Channel (Scatter Chart)

- **Analysis:** A multi-dimensional view mapping the relationship between "Spend" (X-axis) and "Conversions" (Y-axis), where the bubble size represents the ROAS.
 - **Insight:** **Google Ads** shows the highest volume of conversions relative to its high spend, maintaining a strong position. Meanwhile, channels with smaller bubbles but good positioning (like **Instagram**) suggest they are efficient but have lower volume.
 - **Recommendation:** Gradually increase the budget for mid-range channels like **Instagram** to see if they can scale their conversion volume without a significant drop in ROAS efficiency.
-

4. Conversions Distribution (Bar Chart)

- **Analysis:** Comparative performance of channels based on their conversion efficiency score.
 - **Insight:** **Email Campaigns** lead the chart with a score of **3.8**, indicating that direct-to-customer communication is the most effective method for converting leads into customers compared to social media.
 - **Recommendation:** Prioritize growing the email subscriber list and developing automated "drip" campaigns, as this channel provides the highest conversion return for the effort invested.
-

6. Booking Status Slicers

- **Analysis:** Filters for **Confirmed** vs. **Cancelled** bookings.
 - **Insight:** Distinguishes between "Total Interest" and "Real Revenue" to identify where leads are dropping off.
 - **Recommendation:** Analyze **cancelled** bookings to see if certain channels are bringing in low-quality traffic.
-

7. Client Type Slicers

- **Analysis:** Filters for **Loyal**, **Returning**, and **New** customers.
- **Insight:** Tracks the balance between new growth (Acquisition) and long-term value (Retention).
- **Recommendation:** Focus on the "**New**" segment to measure campaign success, and the "**Loyal**" segment to design VIP rewards.

1. Top Key Performance Indicators (Service Health)

- **Total Clients (458):** Represents the unique customer base size, indicating the volume of people served.
- **New Clients Rate (32.70%):** Measures the business growth through successful first-time customer acquisition.

2. Conversions Distribution (Bar Chart)

- **Analysis:** Ranks top individual employees based on their total conversion volume.
 - **Insight:** John (201) and James (189) are the top performers, driving the highest volume of successful outcomes.
 - **Recommendation:** Reward top performers to maintain high morale and study their workflows to replicate their success across the team.
-

3. Performance Detailed Metrics (Matrix/Table)

- **Analysis:** A comprehensive breakdown of individual metrics, including **Stylist Scores** and **Cancellation Rates**.
 - **Insight:** Despite high volume, some employees like Robert (0.13) and Joseph (0.13) have the highest cancellation rates, which could indicate scheduling or communication issues.
 - **Recommendation:** Focus training on employees with cancellation rates above 10% to minimize revenue loss and improve booking reliability.
-

4. Operational & Status Slicers

- **Analysis:** Filters for **Booking Status** (Confirmed/Cancelled) and **Time of Day** (Morning to Night).

- **Insight:** Allows the user to see which shifts are the most productive and which employees handle high-pressure peak hours best.
- **Recommendation:** Use the **Time-of-Day** slicer to optimize staffing levels, ensuring high-performing employees are scheduled during peak booking hours.

Referral	125.93	128.15	127.82	127.87
Total	128.00	128.28	128.27	128.19

1. Top Key Performance Indicators (Customer Satisfaction)

- **Avg Stylist Score (128.19):** Average service quality rating; reflects the overall customer satisfaction with the team's performance.
- **Conversion Rate (6.23%):** The rate of turning interested leads into actual bookings; a strong indicator of booking process efficiency.

- **2. Conversions Distribution per Time (Donut Chart)**
 - **Analysis:** Distribution of bookings across different periods of the day.
 - **Insight:** Operations are nearly balanced, with a slight lead during **Night (26.37%)** and **Afternoon (25.61%)**.
 - **Recommendation:** Increase promotions during the **Morning** period (the lowest at 23.56%) to boost occupancy during quiet hours.
-

3. Client Type (Donut Chart)

- **Analysis:** Segmentation of the client base into **Returning (35.91%)**, **New (33.77%)**, and **Loyal (30.32%)**.
 - **Insight:** Excellent balance between new customer acquisition and retention, indicating brand stability.
 - **Recommendation:** Launch a **Loyalty Program** targeting "Returning" clients to convert them into "Loyal" customers for long-term profit growth.
-

4. New Clients % by Year and Quarter (Area Chart)

- **Analysis:** Tracking the percentage of new customer acquisition from October 2024 to April 2025.
- **Insight:** A significant decline occurred from Oct 2024 to Jan 2025, followed by a slight recovery and stabilization through April 2025.

- **Recommendation:** Review marketing campaigns from Q4 2024 to identify the cause of the decline and prevent recurrence in the next season.
-

5. Performance Matrix by Marketing Channel (Table)

- **Analysis:** A matrix linking marketing channels and client segments based on average ratings.
 - **Insight:** **Instagram** achieves the highest satisfaction among **Loyal** clients (129.04), while **Email Campaigns** perform best for **New** clients (129.76).
 - **Recommendation:** Customize Instagram content to reward loyal customers and use Email primarily for welcoming and offering deals to new clients.
-

6. Booking Status Slicers

- **Analysis:** Filters data by **Confirmed** vs. **Cancelled** status.
 - **Insight:** Helps visualize if customer satisfaction (Avg Stylist Score) is linked to high cancellation rates.
 - **Recommendation:** Monitor if specific time slots (e.g., Night) have higher cancellation rates to adjust scheduling.
-

7. Time of Day Slicers

- **Analysis:** Interactive buttons for **Morning**, **Afternoon**, **Evening**, and **Night**.

- **Insight:** Pinpoints when each customer segment (New vs. Loyal) is most active.
- **Recommendation:** Use **Morning** filters to identify which marketing channels are best for filling off-peak hours.
